

CoralView Administrator

Manage Moves, Adds and Changes with Ease

Your business is on the move, and you're staffing up to sustain growth. With shrinking budgets and countless demands on your time, you can't afford complicated, time-consuming administration of your communications system.

Now CoralView Administrator takes the complexity out of making routine changes to your Coral® communications server.

CoralView Administrator puts you in control with an easy-to-use Graphical User Interface (GUI).

Easy – Accurate – Immediate

CoralView Administrator gives you point-and-click control to configure your company's on-site and remote telephones.

Change a station in minutes. CoralView Administrator gives you a complete list of ports sorted by name or number assignment. Once you find an available station port, simply program the features and buttons for the new station – it's that easy.

Keep pace with business communications demands. Setup, moves and ongoing administration can be centralised and managed within a single building or multiple sites.

Protect inadvertent entry to sensitive areas of the system. CoralView Administrator accommodates multiple users with individual ID/password access. An activity log displays all actions the user executed during a session.

Ease of Management

CoralView Administrator supports three main branch levels for managing your Coral system: CoralView management for user and site definition, system physical layout, and user activity log files.

- Changes to all analog and digital voice terminals
- Station feature assignment
- Class of service assignment

- Button programming
- System and private speed dial libraries
- View port assignment
- Hardware configuration
- System time

When station changes are completed, use the optional DESI program to print professional looking button labels with text and graphics as desired.
