

## Ukraine Supermarket Chain Expands Using IP

One of the biggest benefits of the Coral systems is their ability to connect to other manufacturer's equipment and comprise a cost effective network that meets the customer's requirements, both technically and economically.

This benefit was recently implemented by our Business Partner in the Ukraine, MBK Company. Their customer, the ROST supermarket chain was looking to expand and upgrade their existing corporate network.

In their new IP network, which includes a new location, a Coral IPx Office was added due to its flexibility and its ability to connect to other foreign systems on the network via standard SIP trunks.

In addition, T200 series phones, softphones and DECT capabilities (using an expansion cabinet to the IPx Office) were added to the network.
